INTEGRA / POWER PROJECTS

On-site energy projects

Solar generation, battery storage, venue electricity and EV charging

AUSTRALIAN PROGRAMME / PROJECT BRIEF

SCOPE	FOCUS	STAGE
10–20 proposed sites	Australia	In planning

The project company

Integra Power Projects Pty Ltd is the dedicated investment and development company for a proposed Australian programme. Integra and Mondiaux Pty Ltd share a shareholder. The same operating team is expected to plan the projects, manage construction and oversee operations.

How a proposed site would work

The venue’s electricity demand and parking patterns would guide the design. Rooftop solar could supply the building and EV chargers during daylight hours. A battery could store surplus generation for later demand. System sizing would be assessed individually.

Venue applications

Shopping centres	Trading hours, tenant demand and customer parking duration.
Aged care facilities	Round-the-clock electricity use, accessible parking and staff shifts.
Clubs	Event schedules, evening activity and busy arrival periods.

Development status

Approximately 10–20 venues are contemplated. Individual sites, system capacities and delivery dates are yet to be confirmed. Investment under project agreements is intended to fund equipment procurement, installation and operations.
